

**IAPP**

## **Exam Questions AIGP**

Artificial Intelligence Governance Professional

### NEW QUESTION 1

- (Topic 1)

#### CASE STUDY

Please use the following answer the next question:

Good Values Corporation (GVC) is a U.S. educational services provider that employs teachers to create and deliver enrichment courses for high school students. GVC has learned that many of its teacher employees are using generative AI to create the enrichment courses, and that many of the students are using generative AI to complete their assignments.

In particular, GVC has learned that the teachers they employ used open source large language models (“LLM”) to develop an online tool that customizes study questions for individual students. GVC has also discovered that an art teacher has expressly incorporated the use of generative AI into the curriculum to enable students to use prompts to create digital art.

GVC has started to investigate these practices and develop a process to monitor any use of generative AI, including by teachers and students, going forward.

All of the following may be copyright risks from teachers using generative AI to create course content EXCEPT?

- A. Content created by an LLM may be protectable under U.
- B. intellectual property law.
- C. Generative AI is generally trained using intellectual property owned by third parties.
- D. Students must expressly consent to this use of generative AI.
- E. Generative AI often creates content without attribution.

**Answer:** C

#### Explanation:

All of the options listed may pose copyright risks when teachers use generative AI to create course content, except for students must expressly consent to this use of generative AI. While obtaining student consent is essential for ethical and privacy reasons, it does not directly relate to copyright risks associated with the creation and use of AI-generated content.

Reference: The AIGP Body of Knowledge discusses the importance of addressing intellectual property (IP) risks when using AI-generated content. Copyright risks are typically associated with the use of third-party data and the lack of attribution, rather than the consent of users.

### NEW QUESTION 2

- (Topic 1)

#### CASE STUDY

Please use the following answer the next question:

ABC Corp, is a leading insurance provider offering a range of coverage options to individuals. ABC has decided to utilize artificial intelligence to streamline and improve its customer acquisition and underwriting process, including the accuracy and efficiency of pricing policies.

ABC has engaged a cloud provider to utilize and fine-tune its pre-trained, general purpose large language model (“LLM”). In particular, ABC intends to use its historical customer data—including applications, policies, and claims—and proprietary pricing and risk strategies to provide an initial qualification assessment of potential customers, which would then be routed to a human underwriter for final review.

ABC and the cloud provider have completed training and testing the LLM, performed a readiness assessment, and made the decision to deploy the LLM into production. ABC has designated an internal compliance team to monitor the model during the first month, specifically to evaluate the accuracy, fairness, and reliability of its output. After the first month in production, ABC realizes that the LLM declines a higher percentage of women's loan applications due primarily to women historically receiving lower salaries than men.

Each of the following steps would support fairness testing by the compliance team during the first month in production EXCEPT?

- A. Validating a similar level of decision-making across different demographic groups.
- B. Providing the loan applicants with information about the model capabilities and limitations.
- C. Identifying if additional training data should be collected for specific demographic groups.
- D. Using tools to help understand factors that may account for differences in decision-making.

**Answer:** B

#### Explanation:

Providing the loan applicants with information about the model capabilities and limitations would not directly support fairness testing by the compliance team. Fairness testing focuses on evaluating the model's decisions for biases and ensuring equitable treatment across different demographic groups, rather than informing applicants about the model.

Reference: The AIGP Body of Knowledge outlines that fairness testing involves technical assessments such as validating decision-making consistency across demographics and using tools to understand decision factors. While transparency to applicants is important for ethical AI use, it does not contribute directly to the technical process of fairness testing.

### NEW QUESTION 3

- (Topic 1)

Random forest algorithms are in what type of machine learning model?

- A. Symbolic.
- B. Generative.
- C. Discriminative.
- D. Natural language processing.

**Answer:** C

#### Explanation:

Random forest algorithms are classified as discriminative models. Discriminative models are used to classify data by learning the boundaries between classes, which is the core functionality of random forest algorithms. They are used for classification and regression tasks by aggregating the results of multiple decision trees to make accurate predictions.

Reference: The AIGP Body of Knowledge explains that discriminative models, including random forest algorithms, are designed to distinguish between different classes in the data, making them effective for various predictive modeling tasks.

### NEW QUESTION 4

- (Topic 1)

## CASE STUDY

Please use the following answer the next question:

ABC Corp, is a leading insurance provider offering a range of coverage options to individuals. ABC has decided to utilize artificial intelligence to streamline and improve its customer acquisition and underwriting process, including the accuracy and efficiency of pricing policies.

ABC has engaged a cloud provider to utilize and fine-tune its pre-trained, general purpose large language model ("LLM"). In particular, ABC intends to use its historical customer data—including applications, policies, and claims—and proprietary pricing and risk strategies to provide an initial qualification assessment of potential customers, which would then be routed to a human underwriter for final review.

ABC and the cloud provider have completed training and testing the LLM, performed a readiness assessment, and made the decision to deploy the LLM into production. ABC has designated an internal compliance team to monitor the model during the first month, specifically to evaluate the accuracy, fairness, and reliability of its output. After the first month in production, ABC realizes that the LLM declines a higher percentage of women's loan applications due primarily to women historically receiving lower salaries than men.

The best approach to enable a customer who wants information on the AI model's parameters for underwriting purposes is to provide?

- A. A transparency notice.
- B. An opt-out mechanism.
- C. Detailed terms of service.
- D. Customer service support.

**Answer: A**

### Explanation:

The best approach to enable a customer who wants information on the AI model's parameters for underwriting purposes is to provide a transparency notice. This notice should explain the nature of the AI system, how it uses customer data, and the decision-making process it follows. Providing a transparency notice is crucial for maintaining trust and compliance with regulatory requirements regarding the transparency and accountability of AI systems.

Reference: According to the AIGP Body of Knowledge, transparency in AI systems is essential to ensure that stakeholders, including customers, understand how their data is being used and how decisions are made. This aligns with ethical principles of AI governance, ensuring that customers are informed and can make knowledgeable decisions regarding their interactions with AI systems.

## NEW QUESTION 5

- (Topic 1)

### CASE STUDY

Please use the following answer the next question:

XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

Address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions. One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

Which other stakeholder groups should be involved in the selection and implementation of the AI hiring tool?

- A. Finance and Legal.
- B. Marketing and Compliance.
- C. Supply Chain and Marketing.
- D. Litigation and Product Development.

**Answer: A**

### Explanation:

In the selection and implementation of the AI hiring tool, involving Finance and Legal is crucial. The Finance team is essential for assessing cost implications, budget considerations, and financial risks. The Legal team is necessary to ensure compliance with applicable laws and regulations, including those related to data privacy, employment, and anti-discrimination. Involving these stakeholders ensures a comprehensive evaluation of both the financial viability and legal compliance of the AI tool, mitigating potential risks and aligning with organizational objectives and regulatory requirements.

## NEW QUESTION 6

- (Topic 1)

An EU bank intends to launch a multi-modal AI platform for customer engagement and automated decision-making assist with the opening of bank accounts. The platform has been subject to thorough risk assessments and testing, where it proves to be effective in not discriminating against any individual on the basis of a protected class.

What additional obligations must the bank fulfill prior to deployment?

- A. The bank must obtain explicit consent from users under the privacy Directive.
- B. The bank must disclose how the AI system works under the EII Digital Services Act.
- C. The bank must subject the AI system an adequacy decision and publish its appropriate safeguards.
- D. The bank must disclose the use of the AI system and implement suitable measures for users to contest automated decision-making.

**Answer: D**

### Explanation:

Under the EU regulations, particularly the GDPR, banks using AI for decision-making must inform users about the use of AI and provide mechanisms for users to contest decisions. This is part of ensuring transparency and accountability in automated processing. Explicit consent under the privacy directive (A) and disclosing under the Digital Services Act (B) are not specifically required in this context. An adequacy decision is related to data transfers outside the EU (C).

## NEW QUESTION 7

- (Topic 1)

According to the GDPR's transparency principle, when an AI system processes personal data in automated decision-making, controllers are required to provide data subjects specific information on?

- A. The existence of automated decision-making and meaningful information on its logic and consequences.
- B. The personal data used during processing, including inferences drawn by the AI system about the data.
- C. The data protection impact assessments carried out on the AI system and legal bases for processing.
- D. The contact details of the data protection officer and the data protection national authority.

**Answer:** A

**Explanation:**

The GDPR's transparency principle requires that when personal data is processed for automated decision-making, including profiling, data subjects must be informed about the existence of such automated decision-making. Additionally, they must be provided with meaningful information about the logic involved, as well as the significance and the envisaged consequences of such processing for them. This requirement ensures that data subjects are fully aware of how their personal data is being used and the potential impacts, thereby promoting transparency and trust in the processing activities.

**NEW QUESTION 8**

- (Topic 1)

What is the 1956 Dartmouth summer research project on AI best known as?

- A. A meeting focused on the impacts of the launch of the first mass-produced computer.
- B. A research project on the impacts of technology on society.
- C. A research project to create a test for machine intelligence.
- D. A meeting focused on the founding of the AI field.

**Answer:** D

**Explanation:**

The 1956 Dartmouth summer research project on AI is best known as a meeting focused on the founding of the AI field. This conference is historically significant because it marked the formal beginning of artificial intelligence as an academic discipline. The term "artificial intelligence" was coined during this event, and it laid the foundation for future research and development in AI.

Reference: The AIGP Body of Knowledge highlights the importance of the Dartmouth

Conference as a pivotal moment in the history of AI, which established AI as a distinct field of study and research.

**NEW QUESTION 9**

- (Topic 1)

All of the following may be permissible uses of an AI system under the EU AI Act EXCEPT?

- A. To detect an individual's intent for law enforcement purposes.
- B. To promote equitable distribution of welfare benefits.
- C. To implement social scoring.
- D. To manage border control.

**Answer:** C

**Explanation:**

The EU AI Act explicitly prohibits the use of AI systems for social scoring by public authorities, as it can lead to discrimination and unfair treatment of individuals based on their social behavior or perceived trustworthiness. While AI can be used to promote equitable distribution of welfare benefits, manage border control, and even detect an individual's intent for law enforcement purposes (within strict regulatory and ethical boundaries), implementing social scoring systems is not permissible under the Act due to the significant risks to fundamental rights and freedoms.

**NEW QUESTION 10**

- (Topic 1)

**CASE STUDY**

Please use the following answer the next question:

XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

Address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions. One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

The frameworks that would be most appropriate for XYZ's governance needs would be the NIST AI Risk Management Framework and?

- A. NIST Information Security Risk (NIST SP 800-39).
- B. NIST Cyber Security Risk Management Framework (CSF 2.0).
- C. IEEE Ethical System Design Risk Management Framework (IEEE 7000-21).
- D. Human Rights, Democracy, and Rule of Law Impact Assessment (HUDERIA).

**Answer:** C

**Explanation:**

The IEEE Ethical System Design Risk Management Framework (IEEE 7000-21) would be most appropriate for XYZ Corp's governance needs in addition to the NIST AI Risk Management Framework. The IEEE framework specifically addresses ethical concerns during system design, which is crucial for ensuring the responsible use of AI in hiring. It complements the NIST framework by focusing on ethical risk management, aligning well with XYZ Corp's goals of deploying AI responsibly and mitigating associated risks.

#### NEW QUESTION 10

- (Topic 1)

You asked a generative AI tool to recommend new restaurants to explore in Boston, Massachusetts that have a specialty Italian dish made in a traditional fashion without spinach and wine. The generative AI tool recommended five restaurants for you to visit.

After looking up the restaurants, you discovered one restaurant did not exist and two others did not have the dish.

This information provided by the generative AI tool is an example of what is commonly called?

- A. Prompt injection.
- B. Model collapse.
- C. Hallucination.
- D. Overfitting.

**Answer: C**

#### Explanation:

In the context of AI, particularly generative models, "hallucination" refers to the generation of outputs that are not based on the training data and are factually incorrect or non-existent. The scenario described involves the generative AI tool providing incorrect and non-existent information about restaurants, which fits the definition of hallucination. Reference: AIGP BODY OF KNOWLEDGE and various AI literature discussing the limitations and challenges of generative AI models.

#### NEW QUESTION 14

- (Topic 1)

A US company has developed an AI system, CrimeBuster 9619, that collects information about incarcerated individuals to help parole boards predict whether someone is likely to commit another crime if released from prison.

When considering expanding to the EU market, this type of technology would?

- A. Require the company to register the tool with the EU database.
- B. Be subject approval by the relevant EU authority.
- C. Require a detailed conformity assessment.
- D. Be banned under the EU AI Act.

**Answer: C**

#### Explanation:

Under the EU AI Act, high-risk AI systems like CrimeBuster 9619 would require a detailed conformity assessment before being deployed in the EU market. This assessment ensures that the AI system complies with all relevant regulations and standards, addressing potential risks related to privacy, security, and discrimination. The company would not need to register the tool with the EU database (A), seek approval from an EU authority (B), or face a ban (D) as long as it meets the necessary conformity requirements.

#### NEW QUESTION 18

- (Topic 1)

What type of organizational risk is associated with AI's resource-intensive computing demands?

- A. People risk.
- B. Security risk.
- C. Third-party risk.
- D. Environmental risk.

**Answer: D**

#### Explanation:

AI's resource-intensive computing demands pose significant environmental risks. High-performance computing required for training and deploying AI models often leads to substantial energy consumption, which can result in increased carbon emissions and other environmental impacts. This is particularly relevant given the growing concern over climate change and the environmental footprint of technology. Organizations need to consider these environmental risks when developing AI systems, potentially exploring more energy-efficient methods and renewable energy sources to mitigate the environmental impact.

#### NEW QUESTION 21

- (Topic 1)

What is the primary reason the EU is considering updates to its Product Liability Directive?

- A. To increase the minimum warranty level for defective goods.
- B. To define new liability exemptions for defective products.
- C. Address digital services and connected products.
- D. Address free and open-source software.

**Answer: C**

#### Explanation:

The primary reason the EU is considering updates to its Product Liability Directive is to address digital services and connected products. The current directive does not adequately cover the complexities and challenges posed by modern digital and connected technologies. By updating the directive, the EU aims to ensure that it remains relevant and effective in addressing the liabilities associated with these advanced products, ensuring consumer protection and fair market practices in the digital age.

#### NEW QUESTION 23

- (Topic 1)

Which of the following disclosures is NOT required for an EU organization that developed and deployed a high-risk AI system?

- A. The human oversight measures employed.
- B. How an individual may contest a decision.

- C. The location(s) where data is stored.
- D. The fact that an AI system is being used.

**Answer:** C

**Explanation:**

Under the EU AI Act, organizations that develop and deploy high-risk AI systems are required to provide several key disclosures to ensure transparency and accountability. These include the human oversight measures employed, how individuals can contest decisions made by the AI system, and informing individuals that an AI system is being used. However, there is no specific requirement to disclose the exact locations where data is stored. The focus of the Act is on the transparency of the AI system's operation and its impact on individuals, rather than on the technical details of data storage locations.

**NEW QUESTION 28**

- (Topic 1)

**CASE STUDY**

Please use the following answer the next question:

XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

Address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions. One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost- effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate

them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

If XYZ does not deploy and use the AI hiring tool responsibly in the United States, its liability would likely increase under all of the following laws EXCEPT?

- A. Anti-discrimination laws.
- B. Product liability laws.
- C. Accessibility laws.
- D. Privacy laws.

**Answer:** B

**Explanation:**

In the United States, the use of AI hiring tools must comply with anti-discrimination laws, accessibility laws, and privacy laws to avoid increasing liability. Anti-discrimination laws (A) ensure that hiring practices do not unlawfully discriminate against protected classes. Accessibility laws (C) require that hiring tools are accessible to all applicants, including those with disabilities. Privacy laws (D) govern the handling of personal data during the hiring process. Product liability laws (B), however, typically apply to the safety and reliability of physical products and would not generally increase liability specifically related to the responsible use of AI hiring tools in the employment context.

**NEW QUESTION 31**

- (Topic 1)

**CASE STUDY**

Please use the following answer the next question:

Good Values Corporation (GVC) is a U.S. educational services provider that employs teachers to create and deliver enrichment courses for high school students. GVC has learned that many of its teacher employees are using generative AI to create the enrichment courses, and that many of the students are using generative AI to complete their assignments.

In particular, GVC has learned that the teachers they employ used open source large language models ("LLM") to develop an online tool that customizes study questions for individual students. GVC has also discovered that an art teacher has expressly incorporated the use of generative AI into the curriculum to enable students to use prompts to create digital art.

GVC has started to investigate these practices and develop a process to monitor any use of generative AI, including by teachers and students, going forward.

Which of the following risks should be of the highest concern to individual teachers using generative AI to ensure students learn the course material?

- A. Financial cost.
- B. Model accuracy.
- C. Technical complexity.
- D. Copyright infringement.

**Answer:** B

**Explanation:**

The highest concern for individual teachers using generative AI to ensure students learn the course material is model accuracy. Ensuring that the AI-generated content is accurate and relevant to the curriculum is crucial for effective learning. If the AI model produces inaccurate or irrelevant content, it can mislead students and hinder their understanding of the subject matter.

Reference: According to the AIGP Body of Knowledge, one of the core risks posed by AI

systems is the accuracy of the data and models used. Ensuring the accuracy of AI- generated content is essential for maintaining the integrity of the educational material and achieving the desired learning outcomes.

**NEW QUESTION 32**

- (Topic 1)

Which of the following is NOT a common type of machine learning?

- A. Deep learning.
- B. Cognitive learning.
- C. Unsupervised learning.
- D. Reinforcement learning.

**Answer:** B

**Explanation:**

The common types of machine learning include supervised learning, unsupervised learning, reinforcement learning, and deep learning. Cognitive learning is not a type of machine learning; rather, it is a term often associated with the broader field of cognitive science and psychology. Reference: AIGP BODY OF KNOWLEDGE and standard AI/ML literature.

**NEW QUESTION 34**

- (Topic 1)

A Canadian company is developing an AI solution to evaluate candidates in the course of job interviews. Before offering the AI solution in the EU market, the company must take all of the following steps EXCEPT?

- A. Register the AI solution in a public EU database.
- B. Establish a risk and quality management system.
- C. Engage a third-party auditor to perform a bias audit.
- D. Draw up technical documentation and instructions for use.

**Answer:** A

**Explanation:**

Before offering an AI solution in the EU market, a Canadian company must take several steps to comply with the EU AI Act. These steps include establishing a risk and quality management system (B), engaging a third-party auditor to perform a bias audit (C), and drawing up technical documentation and instructions for use (D). However, there is no requirement to register the AI solution in a public EU database (A). This registration step is not specified as part of the compliance requirements under the EU AI Act for such solutions.

**NEW QUESTION 38**

- (Topic 1)

Machine learning is best described as a type of algorithm by which?

- A. Systems can mimic human intelligence with the goal of replacing humans.
- B. Systems can automatically improve from experience through predictive patterns.
- C. Statistical inferences are drawn from a sample with the goal of predicting human intelligence.
- D. Previously unknown properties are discovered in data and used to predict and make improvements in the data.

**Answer:** B

**Explanation:**

Machine learning (ML) is a subset of artificial intelligence (AI) where systems use data to learn and improve over time without being explicitly programmed. Option B accurately describes machine learning by stating that systems can automatically improve from experience through predictive patterns. This aligns with the fundamental concept of ML where algorithms analyze data, recognize patterns, and make decisions with minimal human intervention. Reference: AIGP BODY OF KNOWLEDGE, which covers the basics of AI and machine learning concepts.

**NEW QUESTION 40**

- (Topic 1)

A company developed AI technology that can analyze text, video, images and sound to tag content, including the names of animals, humans and objects. What type of AI is this technology classified as?

- A. Deductive inference.
- B. Multi-modal model.
- C. Transformative AI.
- D. Expert system.

**Answer:** B

**Explanation:**

A multi-modal model is an AI system that can process and analyze multiple types of data, such as text, video, images, and sound. This type of AI integrates different data sources to enhance its understanding and decision-making capabilities. In the given scenario, the AI technology that tags content including names of animals, humans, and objects falls under this category. Reference: AIGP BODY OF KNOWLEDGE, which outlines the capabilities and use cases of multi-modal models.

**NEW QUESTION 45**

- (Topic 1)

What is the primary purpose of an AI impact assessment?

- A. To define and evaluate the legal risks associated with developing an AI system.
- B. Anticipate and manage the potential risks and harms of an AI system.
- C. To define and document the roles and responsibilities of AI stakeholders.
- D. To identify and measure the benefits of an AI system.

**Answer:** B

**Explanation:**

The primary purpose of an AI impact assessment is to anticipate and manage the potential risks and harms of an AI system. This includes identifying the possible negative outcomes and implementing measures to mitigate these risks. This process helps ensure that AI systems are developed and deployed in a manner that is ethically and socially responsible, addressing concerns such as bias, fairness, transparency, and accountability. The assessment often involves a thorough evaluation of the AI system's design, data inputs, outputs, and the potential impact on various stakeholders. This approach is crucial for maintaining public trust and adherence to regulatory requirements.

#### NEW QUESTION 48

- (Topic 1)

##### CASE STUDY

Please use the following answer the next question:

XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

Address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions. One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

All of the following are potential negative consequences created by using the AI tool when making hiring decisions EXCEPT?

- A. Reputational harm.
- B. Civil rights violations.
- C. Discriminatory treatment.
- D. Intellectual property infringement.

**Answer: D**

##### Explanation:

The potential negative consequences of using an AI tool in hiring include reputational harm (A), civil rights violations (B), and discriminatory treatment (C). These issues stem from biases in the AI system or its misuse, which can lead to unfair hiring practices and legal liabilities. Intellectual property infringement (D) is not a typical consequence of using AI in hiring, as it relates to the unauthorized use of protected intellectual property, which is not directly relevant to the hiring process or the potential biases within AI tools.

#### NEW QUESTION 49

- (Topic 1)

A company is working to develop a self-driving car that can independently decide the appropriate route to take the driver after the driver provides an address.

If they want to make this self-driving car "strong" AI, as opposed to "weak," the engineers would also need to ensure?

- A. That the AI has full human cognitive abilities that can independently decide where to take the driver.
- B. That they have obtained appropriate intellectual property (IP) licenses to use data for training the AI.
- C. That the AI has strong cybersecurity to prevent malicious actors from taking control of the car.
- D. That the AI can differentiate among ethnic backgrounds of pedestrians.

**Answer: A**

##### Explanation:

Strong AI, also known as artificial general intelligence (AGI), refers to AI that possesses the ability to understand, learn, and apply intelligence across a broad range of tasks, similar to human cognitive abilities. For the self-driving car to be classified as "strong" AI, it would need to possess full human cognitive abilities to make independent decisions beyond pre-programmed instructions. Reference: AIGP BODY OF KNOWLEDGE and AI classifications.

#### NEW QUESTION 53

- (Topic 1)

A company is creating a mobile app to enable individuals to upload images and videos, and analyze this data using ML to provide lifestyle improvement recommendations. The signup form has the following data fields:

\* 1.First name 2.Last name 3.Mobile number 4.Email ID 5.New password 6.Date of birth 7.Gender

In addition, the app obtains a device's IP address and location information while in use. What GDPR privacy principles does this violate?

- A. Purpose Limitation and Data Minimization.
- B. Accountability and Lawfulness.
- C. Transparency and Accuracy.
- D. Integrity and Confidentiality.

**Answer: A**

##### Explanation:

The GDPR privacy principles that this scenario violates are Purpose Limitation and Data Minimization. Purpose Limitation requires that personal data be collected for specified, explicit, and legitimate purposes and not further processed in a manner that is incompatible with those purposes. Data Minimization mandates that personal data collected should be adequate, relevant, and limited to what is necessary in relation to the purposes for which they are processed. In this case, collecting extensive personal information (e.g., IP address, location, gender) and potentially using it beyond the necessary scope for the app's functionality could violate these principles by collecting more data than needed and possibly using it for purposes not originally intended.

#### NEW QUESTION 56

- (Topic 1)

A U.S. mortgage company developed an AI platform that was trained using anonymized details from mortgage applications, including the applicant's education, employment and demographic information, as well as from subsequent payment or default information. The AI platform will be used automatically grant or deny new mortgage applications, depending on whether the platform views an applicant as presenting a likely risk of default.

Which of the following laws is NOT relevant to this use case?

- A. Fair Housing Act.
- B. Fair Credit Reporting Act.
- C. Equal Credit Opportunity Act.
- D. Title VII of the Civil Rights Act of 1964.

**Answer:** D

**Explanation:**

The U.S. mortgage company's AI platform relates to housing and credit, making the Fair Housing Act (A), Fair Credit Reporting Act (B), and Equal Credit Opportunity Act (C) relevant. Title VII of the Civil Rights Act of 1964 deals with employment discrimination and is not directly relevant to the mortgage application context (D).

**NEW QUESTION 60**

- (Topic 2)

Training data is best defined as a subset of data that is used to?

- A. Enable a model to detect and learn patterns.
- B. Fine-tune a model to improve accuracy and prevent overfitting.
- C. Detect the initial sources of biases to mitigate prior to deployment.
- D. Resemble the structure and statistical properties of production data.

**Answer:** A

**Explanation:**

Training data is used to enable a model to detect and learn patterns. During the training phase, the model learns from the labeled data, identifying patterns and relationships that it will later use to make predictions on new, unseen data. This process is fundamental in building an AI model's capability to perform tasks accurately. Reference: AIGP Body of Knowledge on Model Training and Pattern Recognition.

**NEW QUESTION 64**

- (Topic 2)

Testing data is defined as a subset of data that is used to?

- A. Assess a model's on-going performance in production.
- B. Enable a model to discover and learn patterns.
- C. Provide a robust evaluation of a final model.
- D. Evaluate a model's handling of randomized edge cases.

**Answer:** C

**Explanation:**

Testing data is a subset of data used to provide a robust evaluation of a final model. After training the model on training data, it is essential to test its performance on unseen data (testing data) to ensure it generalizes well to new, real-world scenarios. This step helps in assessing the model's accuracy, reliability, and ability to handle various data inputs. Reference: AIGP Body of Knowledge on Model Validation and Testing.

**NEW QUESTION 65**

- (Topic 2)

In the machine learning context, feature engineering is the process of?

- A. Converting raw data into clean data.
- B. Creating learning schema for a model apply.
- C. Developing guidelines to train and test a model.
- D. Extracting attributes and variables from raw data.

**Answer:** D

**Explanation:**

In the machine learning context, feature engineering is the process of extracting attributes and variables from raw data to make it suitable for training an AI model. This step is crucial as it transforms raw data into meaningful features that can improve the model's accuracy and performance. Feature engineering involves selecting, modifying, and creating new features that help the model learn more effectively. Reference: AIGP Body of Knowledge on AI Model Development and Feature Engineering.

**NEW QUESTION 68**

- (Topic 2)

To maintain fairness in a deployed system, it is most important to?

- A. Protect against loss of personal data in the model.
- B. Monitor for data drift that may affect performance and accuracy.
- C. Detect anomalies outside established metrics that require new training data.
- D. Optimize computational resources and data to ensure efficiency and scalability.

**Answer:** B

**Explanation:**

To maintain fairness in a deployed system, it is crucial to monitor for data drift that may affect performance and accuracy. Data drift occurs when the statistical properties of the input data change over time, which can lead to a decline in model performance. Continuous monitoring and updating of the model with new data ensure that it remains fair and accurate, adapting to any changes in the data distribution. Reference: AIGP Body of Knowledge on Post-Deployment Monitoring and Model Maintenance.

**NEW QUESTION 69**

- (Topic 2)

You are part of your organization's ML engineering team and notice that the accuracy of a model that was recently deployed into production is deteriorating. What is the best first step address this?

- A. Replace the model with a previous version.
- B. Conduct champion/challenger testing.
- C. Perform an audit of the model.
- D. Run red-teaming exercises.

**Answer:** B

**Explanation:**

When the accuracy of a model deteriorates, the best first step is to conduct champion/challenger testing. This involves deploying a new model (challenger) alongside the current model (champion) to compare their performance. This method helps identify if the new model can perform better under current conditions without immediately discarding the existing model. It provides a controlled environment to test improvements and understand the reasons behind the deterioration. This approach is preferable to directly replacing the model, performing audits, or running red-teaming exercises, which may be subsequent steps based on the findings from the champion/challenger testing.

Reference: AIGP BODY OF KNOWLEDGE, sections on model performance management and testing strategies.

**NEW QUESTION 73**

- (Topic 2)

What is the primary purpose of conducting ethical red-teaming on an AI system?

- A. To improve the model's accuracy.
- B. To simulate model risk scenarios.
- C. To identify security vulnerabilities.
- D. To ensure compliance with applicable law.

**Answer:** B

**Explanation:**

The primary purpose of conducting ethical red-teaming on an AI system is to simulate model risk scenarios. Ethical red-teaming involves rigorously testing the AI system to identify potential weaknesses, biases, and vulnerabilities by simulating real-world attack or failure scenarios. This helps in proactively addressing issues that could compromise the system's reliability, fairness, and security. Reference: AIGP Body of Knowledge on AI Risk Management and Ethical AI Practices.

**NEW QUESTION 76**

- (Topic 2)

What is the term for an algorithm that focuses on making the best choice achieve an immediate objective at a particular step or decision point, based on the available information and without regard for the longer-term best solutions?

- A. Single-lane.
- B. Optimized.
- C. Efficient.
- D. Greedy.

**Answer:** D

**Explanation:**

A greedy algorithm is one that makes the best choice at each step to achieve an immediate objective, without considering the longer-term consequences. It focuses on local optimization at each decision point with the hope that these local solutions will lead to an optimal global solution. However, greedy algorithms do not always produce the best overall solution for certain problems, but they are useful when an immediate, locally optimal solution is desired. Reference: AIGP Body of Knowledge, algorithm types section.

**NEW QUESTION 79**

- (Topic 2)

Which of the following is the least relevant consideration in assessing whether users should be given the right to opt out from an AI system?

- A. Feasibility.
- B. Risk to users.
- C. Industry practice.
- D. Cost of alternative mechanisms.

**Answer:** D

**Explanation:**

When assessing whether users should be given the right to opt out from an AI system, the primary considerations are feasibility, risk to users, and industry practice. Feasibility addresses whether the opt-out mechanism can be practically implemented. Risk to users assesses the potential harm or benefits users might face if they cannot opt out. Industry practice considers the norms and standards within the industry. However, the cost of alternative mechanisms, while important in the broader context of implementation, is not directly relevant to the ethical consideration of whether users should have the right to opt out. The focus should be on protecting user rights and ensuring ethical AI practices.

Reference: AIGP BODY OF KNOWLEDGE, sections discussing user rights and ethical considerations in AI.

**NEW QUESTION 83**

- (Topic 2)

Which of the following use cases would be best served by a non-AI solution?

- A. A non-profit wants to develop a social media presence.O
- B. An e-commerce provider wants to make personalized recommendations.
- C. A business analyst wants to forecast future cost overruns and underruns.
- D. A customer service agency wants automate answers to common questions.

**Answer:** A

**Explanation:**

Developing a social media presence for a non-profit is best served by non-AI solutions. This task primarily involves content creation, community engagement, and strategic planning, which are effectively managed by human expertise and traditional marketing tools. AI is more suitable for tasks requiring automation, large-scale data analysis, and personalized recommendations, such as e-commerce personalization, forecasting cost overruns, or automating customer service responses. Reference: AIGP Body of Knowledge on AI Use Cases and Applications.

**NEW QUESTION 87**

- (Topic 2)

**CASE STUDY**

Please use the following answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveilling the public sites in order to identify individuals that are likely to have committed a crime. It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

Which AI risk would NOT have been identified during the procurement process based on the categories of information requested by the third-party consultant?

- A. Security.
- B. Accuracy.
- C. Explainability.
- D. Discrimination.

**Answer: A**

**Explanation:**

The AI risk that would not have been identified during the procurement process based on the categories of information requested by the third-party consultant is security. The consultant focused on accuracy rates, diversity of training data, and system functionality, which pertain to performance and fairness but do not directly address the security aspects of the AI system. Security risks involve ensuring that the system is protected against unauthorized access, data breaches, and other vulnerabilities that could compromise its integrity. Reference: AIGP Body of Knowledge on AI Security and Risk Management.

**NEW QUESTION 92**

- (Topic 2)

**CASE STUDY**

Please use the following answer the next question:

A mid-size US healthcare network has decided to develop an AI solution to detect a type of cancer that is most likely arise in adults. Specifically, the healthcare network intends to create a recognition algorithm that will perform an initial review of all imaging and then route records a radiologist for secondary review pursuant agreed-upon criteria (e.g., a confidence score below a threshold).

To date, the healthcare network has taken the following steps: defined its AI ethical principles: conducted discovery to identify the intended uses and success criteria for the system: established an AI governance committee; assembled a broad, crossfunctional team with clear roles and responsibilities; and created policies and procedures to document standards, workflows, timelines and risk thresholds during the project.

The healthcare network intends to retain a cloud provider to host the solution and a consulting firm to help develop the algorithm using the healthcare network's existing data and de-identified data that is licensed from a large US clinical research partner.

In the design phase, what is the most important step for the healthcare network to take when mapping its existing data to the clinical research partner data?

- A. Apply privacy-enhancing technologies to the data.
- B. Identify fits and gaps in the combined data.
- C. Ensure the data is labeled and formatted.
- D. Evaluate the country of origin of the data.

**Answer: B**

**Explanation:**

In the design phase of integrating data from different sources, identifying fits and gaps is crucial. This process involves understanding how well the data from the clinical research partner aligns with the healthcare network's existing data. It ensures that the combined data set is coherent and can be effectively used for training the AI algorithm. This step helps in spotting any discrepancies, inconsistencies, or missing data that might affect the performance and accuracy of the AI model. It directly addresses the integrity and compatibility of the data, which is foundational before applying any privacy-enhancing technologies, labeling, or evaluating the origin of the data. Reference: AIGP Body of Knowledge on Data Integration and Quality.

**NEW QUESTION 94**

- (Topic 2)

What is the best method to proactively train an LLM so that there is mathematical proof that no specific piece of training data has more than a negligible effect on the model or its output?

- A. Clustering.
- B. Transfer learning.
- C. Differential privacy.
- D. Data compartmentalization.

**Answer: C**

**Explanation:**

Differential privacy is a technique used to ensure that the inclusion or exclusion of a single data point does not significantly affect the outcome of any analysis,

providing a way to mathematically prove that no specific piece of training data has more than a negligible effect on the model or its output. This is achieved by introducing randomness into the data or the algorithms processing the data. In the context of training large language models (LLMs), differential privacy helps in protecting individual data points while still enabling the model to learn effectively. By adding noise to the training process, differential privacy provides strong guarantees about the privacy of the training data.

Reference: AIGP BODY OF KNOWLEDGE, pages related to data privacy and security in model training.

#### NEW QUESTION 96

- (Topic 2)

A company has trained an ML model primarily using synthetic data, and now intends to use live personal data to test the model.

Which of the following is NOT a best practice apply during the testing?

- A. The test data should be representative of the expected operational data.
- B. Testing should minimize human involvement to the extent practicable.
- C. The test data should be anonymized to the extent practicable.
- D. Testing should be performed specific to the intended uses.

**Answer: B**

#### Explanation:

Minimizing human involvement to the extent practicable is not a best practice during the testing of an ML model. Human oversight is crucial during testing to ensure that the model performs correctly and ethically, and to interpret any anomalies or issues that arise. Best practices include using representative test data, anonymizing data to the extent practicable, and performing testing specific to the intended uses of the model. Reference: AIGP Body of Knowledge on AI Model Testing and Human Oversight.

#### NEW QUESTION 100

- (Topic 2)

A company plans on procuring a tool from an AI provider for its employees to use for certain business purposes.

Which contractual provision would best protect the company's intellectual property in the tool, including training and testing data?

- A. The provider will give privacy notice to individuals before using their personal data to train or test the tool.
- B. The provider will defend and indemnify the company against infringement claims.
- C. The provider will obtain and maintain insurance to cover potential claims.
- D. The provider will warrant that the tool will work as intended.

**Answer: B**

#### Explanation:

To protect the company's intellectual property, the most pertinent contractual provision is ensuring that the AI provider will defend and indemnify the company against infringement claims. This clause means the provider will take responsibility for any intellectual property disputes that arise, thereby safeguarding the company from potential legal and financial repercussions related to the use of the tool. Other options, while beneficial, do not directly address the protection of intellectual property. This concept is detailed in the contractual best practices section of the IAPP AIGP Body of Knowledge.

#### NEW QUESTION 105

- (Topic 2)

Pursuant to the White House Executive Order of November 2023, who is responsible for creating guidelines to conduct red-teaming tests of AI systems?

- A. National Institute of Standards and Technology (NIST).
- B. National Science and Technology Council (NSTC).
- C. Office of Science and Technology Policy (OSTP).
- D. Department of Homeland Security (DHS).

**Answer: A**

#### Explanation:

The White House Executive Order of November 2023 designates the National Institute of Standards and Technology (NIST) as the responsible body for creating guidelines to conduct red-teaming tests of AI systems. NIST is tasked with developing and providing standards and frameworks to ensure the security, reliability, and ethical deployment of AI systems, including conducting rigorous red-teaming exercises to identify vulnerabilities and assess risks in AI systems.

Reference: AIGP BODY OF KNOWLEDGE, sections on AI governance and regulatory frameworks, and the White House Executive Order of November 2023.

#### NEW QUESTION 109

- (Topic 2)

The White House Executive Order from November 2023 requires companies that develop dual-use foundation models to provide reports to the federal government about all of the following EXCEPT?

- A. Any current training or development of dual-use foundation models.
- B. The results of red-team testing of each dual-use foundation model.
- C. Any environmental impact study for each dual-use foundation model.
- D. The physical and cybersecurity protection measures of their dual-use foundation models.

**Answer: C**

#### Explanation:

The White House Executive Order from November 2023 requires companies developing dual-use foundation models to report on their current training or development activities, the results of red-team testing, and the physical and cybersecurity protection measures. However, it does not mandate reports on environmental impact studies for each dual-use foundation model. While environmental considerations are important, they are not specified in this context as a reporting requirement under this Executive Order.

Reference: AIGP BODY OF KNOWLEDGE, sections on compliance and reporting

requirements, and the White House Executive Order of November 2023.

#### NEW QUESTION 110

- (Topic 2)

##### CASE STUDY

Please use the following answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveilling the public sites in order to identify individuals that are likely to have committed a crime. It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

During the procurement process, what is the most likely reason that the third-party consultant asked each vendor for information about the diversity of their datasets?

- A. To comply with applicable law.
- B. To assist the fairness of the AI system.
- C. To evaluate the reliability of the AI system.
- D. To determine the explainability of the AI system.

**Answer: B**

##### Explanation:

The third-party consultant asked each vendor for information about the diversity of their datasets to assist in ensuring the fairness of the AI system. Diverse datasets help prevent biases and ensure that the AI system performs equitably across different demographic groups. This is crucial for a law enforcement application, where fairness and avoiding discriminatory practices are of paramount importance. Ensuring diversity in training data helps in building a more just and unbiased AI system. Reference: AIGP Body of Knowledge on Ethical AI and Fairness.

#### NEW QUESTION 113

- (Topic 2)

The most important factor in ensuring fairness when training an AI system is?

- A. The architecture and model selection.
- B. The data labeling and classification.
- C. The data attributes and variability.
- D. The model accuracy and scale.

**Answer: C**

##### Explanation:

Ensuring fairness when training an AI system largely depends on the data attributes and variability. This involves having a diverse and representative dataset that accurately reflects the population the AI system will serve. Fairness can be compromised if the data is biased or lacks variability, as the model may learn and perpetuate these biases.

Diverse data attributes ensure that the model learns from a wide range of examples, reducing the risk of biased predictions. Reference: AIGP Body of Knowledge on Ethical AI Principles and Data Management.

#### NEW QUESTION 114

- (Topic 2)

##### CASE STUDY

Please use the following answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveilling the public sites in order to identify individuals that are likely to have committed a crime. It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant assist in the procurement process, specifically to evaluate two finalists. Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

The best human oversight mechanism for the police department to implement is that a police officer should?

- A. Explain to the accused how the AI system works.
- B. Confirm the AI recommendation prior to sentencing.
- C. Ensure an accused is given notice that the AI system was used.
- D. Consider the AI recommendation as part of the criminal investigation.

**Answer: D**

##### Explanation:

The best human oversight mechanism for the police department to implement is for a police officer to consider the AI recommendation as part of the criminal

investigation. This ensures that the AI system's output is used as a tool to aid human decision-making rather than replace it. The police officer should integrate the AI's insights with other evidence and contextual information to make informed decisions, maintaining a balance between technological aid and human judgment. Reference: AIGP Body of Knowledge on AI Integration and Human Oversight.

#### NEW QUESTION 117

- (Topic 2)

The planning phase of the AI life cycle articulates all of the following EXCEPT the?

- A. Objective of the model.
- B. Approach to governance.
- C. Choice of the architecture.
- D. Context in which the model will operate.

**Answer: B**

#### Explanation:

The planning phase of the AI life cycle typically includes defining the objective of the model, choosing the appropriate architecture, and understanding the context in which the model will operate. However, the approach to governance is usually established as part of the overall AI governance framework, not specifically within the planning phase. Governance encompasses broader organizational policies and procedures that ensure AI development and deployment align with legal, ethical, and operational standards. Reference: AIGP Body of Knowledge, AI lifecycle planning phase section.

#### NEW QUESTION 122

- (Topic 2)

What is the technique to remove the effects of improperly used data from an ML system?

- A. Data cleansing.
- B. Model inversion.
- C. Data de-duplication.
- D. Model disgorgement.

**Answer: D**

#### Explanation:

Model disgorgement is the technique used to remove the effects of improperly used data from an ML system. This process involves retraining or adjusting the model to eliminate any biases or inaccuracies introduced by the inappropriate data. It ensures that the model's outputs are not influenced by data that was not meant to be used or was used incorrectly. Reference: AIGP Body of Knowledge on Data Management and Model Integrity.

#### NEW QUESTION 123

- (Topic 2)

When monitoring the functional performance of a model that has been deployed into production, all of the following are concerns EXCEPT?

- A. Feature drift.
- B. System cost.
- C. Model drift.
- D. Data loss.

**Answer: B**

#### Explanation:

When monitoring the functional performance of a model deployed into production, concerns typically include feature drift, model drift, and data loss. Feature drift refers to changes in the input features that can affect the model's predictions. Model drift is when the model's performance degrades over time due to changes in the data or environment. Data loss can impact the accuracy and reliability of the model. However, system cost, while important for budgeting and financial planning, is not a direct concern when monitoring the functional performance of a deployed model. Reference: AIGP Body of Knowledge on Model Monitoring and Maintenance.

#### NEW QUESTION 127

- (Topic 2)

Which of the following deployments of generative AI best respects intellectual property rights?

- A. The system produces content that is modified to closely resemble copyrighted work.
- B. The system categorizes and applies filters to content based on licensing terms.
- C. The system provides attribution to creators of publicly available information.
- D. The system produces content that includes trademarks and copyrights.

**Answer: B**

#### Explanation:

Respecting intellectual property rights means adhering to licensing terms and ensuring that generated content complies with these terms. A system that categorizes and applies filters based on licensing terms ensures that content is used legally and ethically, respecting the rights of content creators. While providing attribution is important, categorization and application of filters based on licensing terms are more directly tied to compliance with intellectual property laws. This principle is elaborated in the IAPP AIGP Body of Knowledge sections on intellectual property and compliance.
